## Welcome to the *Ratpocolypse!*

There are more rodents than ever, and like everyone else you're understaffed. Keeping your overall operating costs in-line are a must for any successful business. But how?

**Skyhawk® can help.**

---

### About Skyhawk®

Skyhawk is an award winning complete IoT (Internet of Things) monitoring solution that consists of an innovative software and hardware platform with the latest in low-power cellular connectivity.

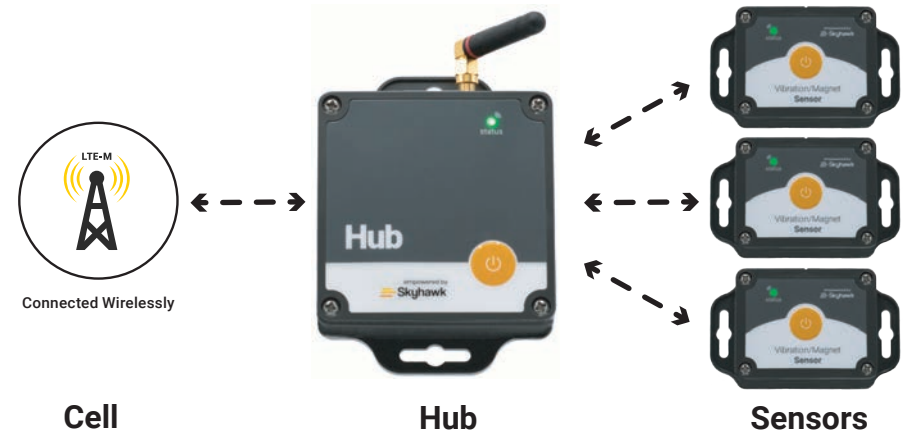

**Awarded  
"Outstanding Innovator of 2019"  
by NWCOA**

**(National Wildlife Control Operators Association)**

## Monitor More Stations

Skyhawk is a cost-effective monitoring solution that allows rodent control technicians to monitor deployed traps and bait stations more efficiently. Simply place a hub at the monitoring location; and then place sensors on each trap or bait station. When a trap is triggered, or a bait station is entered the technician is alerted on the Skyhawk software application.

### Get the *Skyhawk Advantage*

- Use on existing traps and bait stations
- Industrial built weather resistant hardware
- Battery powered sensors and hubs
- Sensors can operate up to 10-years on batteries
- Hubs can operate 1-year or more on batteries
- No AC power is required
- No Wi-Fi network is required
- Simple to use software
- Quickly deployable hardware
- No hub and sensor hardware pairing needed
